DAStU, Politecnica di Milano Milan, June 2Dth-22nd, 2018

## Toㄷ

1. Intraduction, background and mativation
2. Literature review
3. Methodalogy
4. Questionnaire and data description
5. Econometric results
6. Market simulations, policy and managerial implications
7. Summary and conclusions

## I. Intraduction, backgraund and mativation

-E-commerce in 2017 reached US\$2.3 trillion (1.6G billion e-shoppers) with wide regional differences - Norway ranks second among Nardic countries - $65 \%$ of Norwegian aged $18 \% 19$ buy goods anline -E-grocery in 2016 was 5\% of total e-commerce -E-grocery is expected to grow in the future in Norway and inquiring future market share is relevant

## I. <br> Introduction, background and motivation

Research problem: Investigating Norwegian consumers' patential demand for Egracery shapping, and subsequently the implications an transpartation

Research question I: What are the factors affecting consumer preferences towards online and affline gracery shopping channe/s and how they influence consumers choices?

Research question 2: How the E-gracery market share might change in Norway?
Research question 3: What are the implícations for the patential demand of E-
gггсегу?

## 2. Literature review

## 3. Methodology

- E-gracery is still an emerging industry in Norway and observations are few $\rightarrow$ This paper uses stated preference methods
- Data are acquired via: literature review, in-depth interview, focus graups, questionnaire definition, development, pilating an administration
- Agents' channel choice probabilities aге estimated using discrete choice madels (202 respandents/ IZOB choice tasks)

## 4. Duestionnaire and data description

Choice tasks - Atributes identification

## 4. Duestionnaire and data description

## Atributes <br> level <br> identification

| Alternatives | Attributes | Levels |
| :---: | :---: | :---: |
| In-store | Product price (PP) | Stated |
|  | Travel time (TT) | Stated |
|  | Product range (PR) | 100\% |
| Home delivery | Product price (PP) | Pivoted: 90\%, stated (100\%), 110\% |
|  | Service cost (SC_HD) | 0,60,100 Nok |
|  | Time window (TW) | $30 \mathrm{~min}, 60 \mathrm{~min}, 120 \mathrm{~min}$ |
|  | Product range (PR) | 50\%, 150\%, 100\% |
|  | Lead time (LT) | 1 hour, 6 hours, 12 hours |
| Click and pick | Product price (PR) | Pivoted: $90 \%$, stated (100\%), 110\% |
|  | Travel time (TT) | Pivoted: 50\%, 75\%, stated (100\%) |
|  | Service cost (SC_CP) | 0,50 |
|  | Product range (PR) | 50\%, 150\%, 100\% |
|  | Lead time (LT) | 1 hour, 6 hours, 12 hours |

## 5. Econometric results

|  |  | ${ }^{* * * * * * *}$, | signiicance | \%.5\%, |  | Pseudo R2 |  |

## 5. Economemtric results

- Consumers' WTP is positive for: widerproduct range, shorter travel time, time window or lead time
- I minute TT equals 3.225 NOK product price, and 1.707 NDK service cost for CP choice. Agents prefer to pay higher product price than service cost to save travel time
- ILT hour = 4 NDK (with respect to SC_HD)

| Wheasurs |  |
| :---: | :---: |
| WTP [LT(Min)/PP(NGK)] | -0.132NDK/Min |
| WTP [PR(\%)/PP(NOK)] | 0.728N0K/+1\% |
| WTP [TT(Min)/PP(NGK)] | -3.225NDK/Min |
| WTP [TW(Min)/PP(NDK)] | -0.475NDK/Min |
| WTP [LT(Min)/SL_HD(NDK)] | -0.067NDK/Min |
| WTP [PR(\%)/SE_HD(NGK)] | -0.370NOK/+\|\% |
| WTP [TW(Min)/SE_HD(NDK)] | -0.242NDK/Min |
| WTP [LT(Min)/SE_[P(NGK)] | -0.770NDK/Min |
| WTP [PR(\%)/SC_LP(NOK)] | 0.386NGK/+1\% |
| WTP [TT(Min)/S[_LP(NGK)] | - $1.707 \mathrm{NDK} / \mathrm{Min}$ |

## 5. Economemetric results

## Subgroups comparisons (naive heterogeneity)

- Agents with previous E -gracery experiences prefer HD while PR is less important
- Those without E-grocery experiences have na clear preferences between HD and SM
- Agents that have already purchased grocery online prefer to pay higher product price for saving travel time than those who have not such experience
- Agents who usually perform dedicated trip prefer HD
- Older people are willing to pay more service cost to save travel time than younger ones
- Males prefer HD, whereas females prefer SM
- Agents with usually more than 3 shopping bags prefer HD

## G. Market simulations, policy and managerial implications

Current market share

|  | IN STORE |  |  |  | HOME DELIVERY |  |  |  |  | CLICK AND PICK |  |  |  | $\mathbf{P}(\mathbf{i})$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { PP } \\ \text { (NOK) } \end{gathered}$ | $\begin{gathered} \text { TT } \\ \text { (MIN) } \end{gathered}$ | $\begin{gathered} \text { PR } \\ (\%) \\ \hline \end{gathered}$ | $\begin{gathered} \text { PP } \\ \text { (NOK) } \end{gathered}$ | $\begin{gathered} \text { SC_HD } \\ \text { (NOK) } \end{gathered}$ | $\begin{gathered} \text { TW } \\ \text { (MIN) } \end{gathered}$ | $\begin{gathered} \text { PR } \\ (\%) \end{gathered}$ | $\begin{gathered} \text { LT } \\ \text { (HOUR) } \end{gathered}$ | $\begin{gathered} \text { PP } \\ \text { (NOK) } \end{gathered}$ | $\begin{aligned} & \text { SC_CP } \\ & \text { (NOK) } \end{aligned}$ | $\begin{gathered} \text { TT } \\ \text { (MIN) } \end{gathered}$ | $\begin{gathered} \text { PR } \\ (\%) \end{gathered}$ | $\begin{gathered} \text { LT } \\ \text { (HOUR) } \end{gathered}$ | STORE | HD | CP |
| Large basket | 1000 | 20 | 100 | 1000 | 59 | 120 | 100 | 12 | 1000 | 0 | 20 | 100 | 12 | 71,1\% | 12,8\% | 16,1\% |
| Small basket | 500 | 20 | 100 | 500 | 89 | 120 | 100 | 12 | 500 | 49 | 20 | 100 | 12 | 83,2\% | 8,7\% | 8,0\% |
| Scheduled delivery | 1000 | 20 | 100 | 1000 | 39 | 120 | 90 | 12 | 970 | 0 | 10 | 90 | 12 | 61,8\% | 15,0 \% | 23,2\% |
| Express delivery | 1000 | 20 | 100 | 1000 | 299 | 30 | 90 | 1 | 970 | 0 | 10 | 90 | 12 | 72,3\% | 0,5\% | 27,1\% |

Scenaria l: From separated prices to free service cost
Scenario Z: Lead time is reduced from 12 hours to 6 hours.
Scenario 3: Reducing the time window from 2 hours to I hour.
Scenario 4: Increasing product range by 20\%
Scenario 5: Reducing travel time by 50\%

## B. Market simulations, policy and managerial implications

## Scenario Simulations

|  | IN STORE |  |  | HOME DELIVERY |  |  |  |  | CLICK AND PICK |  |  |  |  | $\mathbf{P ( i )}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { PP } \\ (\mathrm{NOK}) \\ \hline \end{gathered}$ | $\begin{gathered} \mathrm{TT} \\ (\mathrm{MIN}) \end{gathered}$ | $\begin{aligned} & \text { PR } \\ & (\%) \\ & \hline \end{aligned}$ | $\begin{gathered} \text { PP } \\ (\mathrm{NOK}) \end{gathered}$ | $\begin{gathered} \text { SC_HD } \\ (\mathrm{NOK}) \end{gathered}$ | $\begin{gathered} \text { TW } \\ (\mathrm{MIN}) \end{gathered}$ | $\begin{aligned} & \text { PR } \\ & (\%) \\ & \hline \end{aligned}$ | $\begin{gathered} \mathrm{LT} \\ \text { (HOUR) } \end{gathered}$ | $\begin{gathered} \text { PP } \\ (\mathrm{NOK}) \end{gathered}$ | $\begin{aligned} & \mathrm{SC}+\mathrm{CP} \\ & (\mathrm{NOK}) \end{aligned}$ | $\begin{gathered} \mathrm{TT} \\ (\mathrm{MIN}) \end{gathered}$ | $\begin{aligned} & \text { PR } \\ & (\%) \end{aligned}$ | $\begin{gathered} \mathrm{LT} \\ (\mathrm{HOUR}) \end{gathered}$ | STORE | HD | CP |
| Base | 500 | 20 | 100 | 500 | 89 | 120 | 100 | 12 | 500 | 49 | 20 | 100 | 12 | 83,2 \% | 8,7\% | 8,0 \% |
| Scenario 1 | 500 | 20 | 100 | 589 | 0 | 120 | 100 | 12 | 549 | 0 | 20 | 100 | 12 | 72,7 \% | 16,8 \% | 10,5\% |
| Scenario 2 | 500 | 20 | 100 | 500 | 89 | 120 | 100 | 6 | 500 | 49 | 20 | 100 | 6 | 76,2 \% | 12,4 \% | 11,4 \% |
| Scenario 3 | 500 | 20 | 100 | 500 | 89 | 60 | 100 | 12 | 500 | 49 | 20 | 100 | 12 | 81,1 \% | 11,1 \% | 7,8\% |
| Scenario 4 | 500 | 20 | 100 | 500 | 89 | 120 | 120 | 12 | 500 | 49 | 20 | 120 | 12 | 81,3 \% | 9,8\% | 9,0\% |
| Scenario 5 | 500 | 20 | 100 | 500 | 89 | 120 | 100 | 12 | 500 | 49 | 10 | 100 | 12 | 81.0 \% | 8,5\% | 10.5\% |

Scenarial: From separated prices to free service cast
Scenario 2: Lead time is reduced from I 2 haurs to G hours
Scenaria 3: Reducing the time window from 2 hours to 1 hour
S'cenaria 4: Increasing product range by 2UW
Scemaria 5: Reducing travel time by 50\%

## G. Market simulations, policy and managerial implications

## Managerial implications

- Since respondents are more sensitive towards Service Cost than Purchase Cost $\rightarrow$ «Free service cast» will increase Egrocery market share
- Differentiated fee can stimulate customers choice for larger baskets and non-peak transportation hours $\rightarrow$ A dynamic pricing strategy can probably be introduced with financial surcess
- Marketing strategy towards different socio demographic groups seems plausible $\rightarrow$ females' WTP to save travel times is greater than men's

## Policy implications

- Information technologies and innovative transport vehicles (e.g. autonomous vehicles) will play an important role
- A well developed network of praximity stations and pickup points are relevant for E-graceries
- Coaperation on last mile delivery among aperators should be explored further

## 7. Canclusions

## Contributians

- The study provides a detailed database of 202 households' gracery shopping choices
- ...Estimates utility functions for three gracery shopping alternatives: in store, home delivery, and click and pick
- ...Draws managerial/policy implications on the base of given experiment results

## Limitations

- Consumers' channel choice could be influenced by other factors this study did not consider
- This study hypothesizes consumers decision making process is stable over time while one should test this

## Future research

- Further research could focus on developing a framework far detecting interactions in last-mile E-groceries delivery (e.g. ABM)
- Develop comparable studies in different countries (Italy and China under way!).
- Estimate more sophisticated models (e.g. heterogeneity, non -linearity) and investigate dynamic consumer channel choice
- Estimate environmental impact of E-grocery channel choice
